Catalogue \$2.00

January 2004

Greetings! Here we are back for another exciting year growing and selling Canada's Best Daylilies.

We have many many exciting new cultivars in our gardens including the 2003 Stamile Doubles collection and the 2003 Stamile Spider collection. We feel honoured to have hybridizing friends that have allowed us to trial some plants before their introduction. Jeff & Jackie's 'Peach Rum Festival' will be into its 3rd year here and Enman Joiner's 'Word of Honor' (2004) is into it's 2nd year.

Arcadian Daylilies remains committed to trialing Great Daylilies from Great Hybridizers and offering the best of the best, to Canadian Collectors. We will have more new arrivals in our gardens this year, some of which will be blooming in 2004, and a few that there many be enough extra to sell.

The Humber Arboretum Project has become a screaming success! The Stout Silver Medal Collection had the last missing cultivars installed in August of 2003, the majority of the collection has matured into an incredible floral display. We were surprised to see how much variance there was in the bloom season of the 53 SSM winning cultivars. The earliest started blooming mid June and mid September saw more that half a dozen still blooming. Thank you to all who have taken the time, after visiting the Arboretum to tell us how much they enjoyed it. We will continue our guided walks along the Daylily collection for interested groups.

We will be opening our 2004 season exhibiting at 2 Trade Shows. The 'Success With Gardening Show' March 18-21 and 'Canada Blooms' March 3-7. Stop by & visit us if you can.

Our Internet web site <u>www.ArcadianDaylilies.com</u> continues to grow as an important part of our business. Our colour catalogue is downloadable from the web in Adobe PDF format. Try it out if you want a copy to keep on your hard disk, or print off an extra copy for yourself or a friend. Let us know how it works for you so that we can continue to improve our service to our customers.

As time provides we will be adding more functionality, more photos and more information to the web.

Our summer Open Garden/Plant Sale has become such a success that we will be opening our Etobicoke Garden for 6 weekends in June, July & August. We will be digging from the ground as well as selling many container grown daylilies and other perennials not listed in this catalogue. Many new introductions and unusual and distinctive cultivars you won't find elsewhere will be in bloom.

June 19-20, July 10-11, July 17-18, July 24-25, August 7-8, August 14,15 8 am to 4pm in our Etobicoke garden.

We grow many daylilies not listed in this catalogue. We list here only the cultivars we have the largest inventory of. If you saw something in a previous catalogue but not here we may still have it. Visitors to our gardens will see that there are hundreds of other cultivars also for sale. Feel free to ask.

May your 2004 garden be the best ever.

Sandy Carlton & Family

Cover Photo – "**Peach Rum Festival**" hybridized by Jackie Pryor, is one of the most incredible daylilies we have ever grown. A Very Late bloomer it started blooming August 31 for us and continued until the 2nd week of November when a week of sub freezing nights destroyed the last remaining buds. A pale peach self, it is gloriously diamond dusted, fragrant from several feet away, 5 way branching and budcount of 28. Often the midribs of the petloids in the 3rd and 4th rosettes are raised into folded crests. Extended bloom lasts 36-40 hours in Sept and longer in Oct & Nov.

2004 Daylily Listings

Each cultivar listing includes

Cultivar Name (Hybridizer, Year of Reg) Major Awards Type Scape Height Bloom Diameter Season Ploidy

Major Awards received may include.

Peach Rum Festival (Pryor J 2004)

38" 5.5" Dormant VL Reblooms Diploid See cover photo. Nocturnal, Extended, Diamond Dusted, Fragrant, Reblooms, Branching 5 way, Budcount 28. Our September blooms were 100% perfect doubles all having 4 rosettes of 3 segments each. Rebloom was a little smaller & shorter about 95% double for us although Jeff and Jackie report up to 30% singles. Peach Rum Festival (96123) was the highlight of our 2003 bloom season. Jeff & Jackie asked us to trial 96123 in Canada to see if it was too late to bloom in our climate. First Flower Open was August 31, Last flower open was October 1 and then the rebloom started October 3. September blooms last 36 to 40 hours opening late afternoon or evening and wilting away mid late morning a day and a half later. With cooler temperatures October blooms last even longer. November blooms up to 3 days, amazing how easily the buds opened in cold weather We are really proud to be able to offer Peach Rum Festival to our customers. \$110.00SingleDivision

Cultural Advice

Daylilies are one of the easiest and most forgiving perennials to grow. Here are a few tips to help you get the most out of your plants.

The crown, where leaves meet roots should be about an inch below the soil surface. Planting too deep will result in diminished bloom and weakened plant while it grows an elongated crown to come closer to the surface. Planting too shallow can result in exposed roots that are prone to damage.

Daylilies can be planted anytime the ground can be broken and that is only because your shovel won't work too well in frozen ground. There is some evidence that plants <u>divided</u> late in the autumn are more prone to infection and rot, however our experience with planting container grown plants even into December has proven favorable.

Extra care with fall plantings, tamping the ground down around the plant, watering well to settle and mulching after the ground has frozen will prevent frost heaving and exposed roots, which can weaken or kill your daylily.

Daylilies are tolerant of any soil from clay to sand but incorporating lots of organic matter into the soil before you plant, is probably the single best thing you can offer your cherished daylilies. Compost, well rotted manure, peat and soiless potting mixes will all contribute to good tilth, air and water penetration to the roots, and the ability of the soil to provide a slow release of nutrients to your plants. Dig a hole much larger than the plant will require, removing the soil and mixing with equal volumes of compost or other organic matter. Of course this will mean the level of your bed will be higher than you started with but it will settle over the months following. When planting, tamp the soil down and water well to help eliminate larger air pockets. Watch in the weeks following and be prepared to add another inch or 2 on top if you do notice that excessive settling is occurring or that roots are becoming exposed.

Daylilies are shade tolerant but if they don't get 5 hours of direct sun per day you won't get maximum bloom.

Adequate water leading up to bloom season is essential for good bud development (rule of thumb 1.5" weekly)

Fertilizer

Everyone has their own opinion on fertilizing. Generally the more sun and water your plants receive the more fertilizer they will utilize. Gardeners that incorporate lots of rich organic matter into their soil can get spectacular bloom with no chemical fertilizers.

If you feel you need to give your plants a boost, here are some suggestions. Water soluble fertilizers provide a cheap, easy and flexible method of delivering nutrients to your plants, including micronurients, that are included in many standard formulations. Water soluble fertilizers may be used as a foliar feed if diluted to $\frac{1}{2}$ strength. Soaking roots in a dilute solution (¹/₄ strength) of 10-52-10 before planting, and/or watering with this formulation after planting can help the roots get started.

A balanced 20-20-20 during vegetative growth will help the plant develop size and strength.

A high Potassium formulation fed weekly for a month before bloom will help the scapes and buds develop well. ie: 10-10-27 or 15-15-30

When using these fertilizers it is always better to err on the cautious side – it is just not good plant management to do damage with too much.

Because of our very intensive cultural practices we use a premium grade, coated time-release (6 month) fertilizer incorporated into the soil around the roots when planting. We also have found excellent results using a handful of pure alfalfa pellets incorporated into the soil. As the alfalfa breaks down it releases a natural plant growth hormone (Triacontanol) that positively influences the daylily growth.

Daylilies emerge in spring with a vigorous vegetative growth cycle, followed by a reproductive cycle during which bloom scapes, flowers and seeds are produced. The reproductive cycle is followed by a second vegetative growth cycle in the late summer and autumn. Strength is built and energy stored during the vegetative cycles and drawn on during the reproductive cycle. A weak plant in a reproductive cycle can be encouraged to start strengthening itself by simply removing the bloom scape. (if you can bear to do that)

Deer & Daylilies

We frequently hear about, and have seen first hand the damage that Deer can do in the garden. Bloom scapes, grown to perfection but with the buds gone – nibbled away for a tasty breakfast – (daylily buds can be eaten as a vegetable by humans as well)

We generally avoid promoting brand name products, but this one is too good not to mention. Skoot® is a chemical repellent containing Thiram, that is distasteful but harmless to pests like deer, mice and rabbits. Skoot may be applied with a paintbrush or diluted with water and sprayed on. It dries to a thin film that lasts through many rains, the idea being that the pest will take one bite and not bother again.

For best protection against deer, spray on developing bloom scapes and again as buds reach maturity. We have seen daylily beds protected with Skoot, in full glorious bloom, littered with deer footprints but not a bud touched.

Daylily Rust

Our Gardens remain rust free. Evidence seems to indicate that Puccinia hemerocallidis (Daylily Rust) will not survive Canadian winters. Rust has become largely a non issue for the average Canadian collector.

Autumn Care of Daylilies

Many daylily collectors are in the habit of cutting back foliage after bloom and/or again in autumn, before winter. The thinking is that removing the ratty foliage allows new healthy growth to occur unobstructed.

There is a growing body of evidence to indicate that daylilies in general and evergreen types in particular, benefit from having the healthy foliage left intact. Evergreens will continue to store energy during warm sunny days even into December.

Daylily foliage types are not as simple as the old thinking (Dormant, Semi-Evergreen, & Evergreen). Today we see many Dormants that keep lush green foliage well into the autumn and others that shed their leaves immediately after bloom with little autumn growth.

Many Evergreen daylilies are winter hardy in our climate, they continue to photosynthesize and store energy late into the year, until the foliage is finally destroyed by deep freezing in December or January. Since evergreens vary in their tenderness/hardiness in our climate, allowing them to store all the extra late season strength they can, is a definite benefit.

A preferred method of dealing with browning foliage in the autumn is to remove only the leaves that the plant is obviously shedding. This is best done by hand, one method being to grasp each fan near the base, sliding the hand upward with enough pressure to remove any loose/damaged/dieing leaves. Any leaves that are sound and green should be left on the plant (this applies to dormant and semi-evergreen daylilies as well). Leaves that are sound and green but have browning ends, may have the brown cut off, leaving as much green as possible. While this method involves more labour it will result in a more attractive display while allowing for good autumn growth.

For larger plantings a method I have occasionally used is to pull a lawn rake over the plants removing the loose/damaged/dieing leaves while doing only a little damage to the strong healthy foliage.

Tissue Culture

is a common practice amongst many perennial growers including daylily growers. There is much debate and emotion attached to the issue. All plants in our catalogue are field grown and not from tissue culture. We Guarantee that no mailorder will be filled with tissue culture plants. We do carry tissue culture plants for the wholesale market and we do offer these to our customers with tremendous savings at trade shows and in the discount section during our open gardens. Please ask if you have any questions.

Summer Open Garden/Plant Sale

Our bloom season Open Gardens have been tremendously well attended since being moved to our Etobicoke Garden. For 2004 we will have our Etobicoke Garden open for 6 weekends with more container grown plants, more varieties of Hosta and other perennials and more help on hand to serve you faster.

Open Gardens will be 8:00 am to 4:00 pm on the following Saturdays and Sundays only

June 19 & 20 - this weekend will be an opportunity to see the earliest of the bloom and to pick from thousands of bloom sized container grown plants that can fill your July and August garden with colour. We will be happy to dig from the ground as well.

July 10-11, 17-18, 24-25 will cover the peak of the early and midseason bloom in our gardens, pick from our vast selection of containers in full bloom or have us dig plants from the ground.

August 7-8, 14-15 we have noticed an increasing interest in later daylilies. These dates will provide an opportunity to see the late mid season bloom – August is a perfect time to plant new additions to your garden, either container grown or bare root.

Above Dates From 8:00 am to 4:00 pm At 14 Paula Blvd. Etobicoke

We will have more help on hand this year but still, things can get so busy, that we simply can not give each of our visitors the time and personal attention we would like. Hope this is a helpful hint – Sunday mornings tend to be the best time to get our undivided attention, we are bright eyed and bushy tailed starting right at 8am & everyone else seems to be sleeping in.

Garden Visitors

We are one of Canada's largest daylily growers and mail-order sources but do not operate a retail outlet. **Garden visitors are welcome by appointment**, at both our Etobicoke garden and our Hendrick Avenue garden often possible on short notice. We operate from home. Please have the courtesy to call ahead. Drop in visitors cannot be accommodated.

Public Daylily Gardens are open year round at the Humber Arboretum behind Humber College Main campus and we can recommend a number of excellent Garden Centers and Nurseries that carry our daylilies if you just want to drop in.

Reduce Reuse Recycle

We would be pleased to reuse your old nursery pots. Sizes from 1 gallon up, they really should be returned to use, rather than sent to the dump.

Mail Ordering

Daylilies ship very easily through the mail. Fresh dug plants have the soil washed from the roots. Leaves and roots are trimmed to prevent breakage and excess water loss. When dry, plants are packed in a ventilated cardboard box and shipped to you by **Expedited Parcel**.

Delivery by Expedited Parcel to most major centers in Ontario and Quebec takes 1 or 2 days. To a smaller town or Rural Route will take a day longer. Delivery to Western and Atlantic Canada will take 3 or 4 days in most cases, although it can take as long as 4 or 5 business days to more remote areas. **Xpresspost** delivery is available at extra cost – please enquire for rates and times.

All plants we ship are minimum double fans (Excepting 2004 Introductions). 2004 Intros will be shipped as Single Divisions which will be minimum 1 mature bloom sized fan, with, depending on how well they have multiplied since 2003, smaller offshoots attached. Cultivars that grow well for us are often shipped out as triples, quads or better. We find that up to 75% of our bare root mail order plants bloom the first year.

Shipping Dates for 2004 have changed – mail-order shipments will start May 3, (there will be no shipments during April, unless by special arrangement) we will ship as many orders as possible during the first 3 weeks of May, however the majority of mail-orders will be shipped the last week of May and the first week of June. We try extremely hard to meet your delivery requests, but occasionally due to factors out of our control we can be a week or two behind. As always shipping priority is given on a First-Paid-For-Basis. You are always welcome to phone or email to enquire about shipping and availability. If an e-mail address is included on your order we will notify you when your plants are being shipped.

Every year it happens – we sell out of something and have to turn away orders for that cultivar – every effort is made to only include cultivars in our catalogue that there are adequate supplies of. We have learned to expect to be surprised by which cultivars are popular and sell out - if there is something special you want, you are best advised to place your order early – again, plants are committed on a First-Paid-For-Basis. If, when we ship your order, we cannot supply any of the plants you have requested we will provide a refund cheque for those plants, unless you have specified on your order that we may substitute. You are welcome to include a list of substitutions.

Order Pickup

Customers are always welcome to pick up their orders and save the shipping charge.

We grow many cultivars not listed in this catalogue. If you saw it in a previous catalogue we may still have it – feel free to ask.

Fragrance

Past customers will know that we have played down the significance of daylily fragrance. In this past year we have encountered an increasing number of Very Fragrant Daylilies that are causing us to rethink our position.

Particularly memorable are the fragrant cultivars we encountered at Jeff & Jackie's Daylilies in Tennessee and the fragrant cultivars in Joiner Gardens in Georgia.

Hybridizers that are able to think outside the box, and not limit their expectations to what has been accomplished in the past are pushing fragrance to new levels. We now have daylilies that are fragrant from several feet away and may soon experience daylily gardens that are filled with fragrance rivaling that of Oriental Lilies.

All of Jeff & Jackie's 2002 & 2003 introductions will be blooming during our Garden Sale this year and we are importing this spring a number of newer Joiner Daylilies to add to the many fragrant cultivars we already offer.

Some of Our Favorites that Warrant

a Second Mention - (plants that perform particularly well are shipped as larger divisions)

Bayou Bride – grows like a weed, one of the most vigorous cultivars we grow. A 1995 registration from Jeff Salter, BB blooms and blooms then reblooms some more – good for a summer filled with soft pastel beauty above lush green healthy foliage.

Daring Dilemma – has been a leader in popularity polls since it's 1993 introduction. Although still eligible for the 2004 Stout Silver Medal, Daring Dilemma will probably fall just short of the Top Honour a daylily can receive. DD is an excellent Rebloomer putting up the second set of bloom scapes before the initial bloom is finished, and often putting up a third set of scapes in September

Purity – the tallest daylily we currently offer for sale. We love the way these soft yellow and fragrant blooms contrast against the blue backdrop of the sky. Mid Late season bloom – may not start until the beginning of August then blooming for 4-5 weeks

Kindly Light – Classic Spider, big blooms very narrow form and very fine foliage as well. 7.7:1 ratio is about as good as a spider gets yet KL maintains the vigour of a 1950's daylily.

Peggy Jeffcoat – Stunning, Stunning, Stunning this pale cream polychrome mother of pearl opalescence diamond dusted with big 6.5" blooms sitting just above the foliage. PJ makes a perfect specimen plant in the choicest spot in your garden or can be massed in a border – front row only please – PJ is too beautiful to put anywhere else.

Public Daylily Gardens at Humber Arboretum

Arcadian Daylilies has continued working in partnership with the Humber Arboretum to build a truly world class daylily collection, illustrating the many styles, sizes, heights and colours of the modern Daylily as well as many historical daylilies from "Apricot" introduced by George Yeld in 1893, onwards.

The highlight of the Arboretum collection is undoubtedly the Stout Silver Medal bed, which winds for 200 feet through an incredible park-like setting featuring mature trees, ponds, immaculate flowerbeds, & open lawns.

The Stout bed was specially prepared to illustrate the evolution of the daylily since Hesperus received the first Stout Medal in 1950.

In August 2003 we completed the Stout Silver Medal Collection. To our knowledge this is the only complete SSM collection in Canada. A handful of the cultivars in this collection are such tender evergreens that they will not survive our Canadian winters. The staff at the arboretum have put the extra effort into moving the most tender of the plants into the greenhouse for the winter and they will be reinstalled in the Stout Medal Bed every spring.

This is not the way daylilies are intended to be grown, however for the purposes of maintaining this historically significant collection for Canadian Daylily enthusiasts to enjoy the extra effort is being applied.

The Humber Arboretum is itself a Joint Project between the City of Toronto Parks, the Toronto Region Conservation Authority and Humber College.

Located at the back of Humber College north campus the arboretum is open daylight hours, 365 days a year. Parking for arboretum visitors is free in Lot #1 behind Humber College. Use Entrance "A" to the college.

Access is off of Humber College Blvd west of Hwy 27 and south of Finch Ave. Washroom facilities are available in the residence building adjacent the arboretum.

Guided tours of the daylily beds can be arranged for interested groups during the bloom season. For more information

Humber Arboretum Species Collection

During 2003, work began on a Collection of Species Daylilies at the Arboretum. These daylilies for the most part have more historical significance than commercial value, and the Humber Arboretum is the perfect place to preserve and display this important plant material.

The Species Collection currently contains over 20 species and sub-species, that will be blooming for the first time at the Arboretum in 2004. Some species are extra early, so we may be seeing bloom as early as May 2004.

Special Thanks to Gil Stelter who donated many of the Species for the Arboretum collection.

Gil and his wife Sally, operate Gryphon Gardens in Guelph, which is an American Hemerocallis Society Display Garden and will be a part of the 2004 Region 4 tour. Gryphon Gardens has the largest species collection we are aware of and their generous help now provides that this important plant material will be preserved in a public garden as well.

Gil has done considerable work crossing modern cultivars back to species to restore vigour and hardiness of the species while maintaining the beauty of the modern cultivars. Gil's work is also helping to provide a better understanding of Ploidy with the relationship of modern tetraploids and diploids to some of the triploid species.

Gryphon Gardens is open by appointment 519-821-9267 and they do sell daylilies on a very limited scale.

A Favorite that Warrants a Second Mention

Moonlit Masquerade – Pale Cream near White with a dark purple eyezone above a green throat, MM has a fine purple edge that doesn't quite make it to the tip of the petals. A vigorous plant with robust blemish free foliage MM is an early midseason bloomer that often starts the 3rd week of June and blooms with clusters of flowers for 5 or 6 weeks with rebloom after that. An absolute first choice, MM is a leading contender for the 2004 Stout Silver Medal.

Spiders

In the early years of daylily hybridizing narrow petaled spidery type blooms were common. During the 1970's and 1980's, hybridizers sought to create dinnerplate style daylilies with wide flat petals. Spiders were very much out of vogue. Today spiders are enjoying a resurgence in popularity, so much so that we have difficulty growing enough spiders to meet demand.

In order to qualify as a true spider the petals must consistently be at least 5 times longer than wide. Spider variants may qualify with a length to width ratio of 4:1

Our 2004 collection of spiders & variants has grown. We are pleased to offer Dark Star, Firestorm, Flutterbye, Jan's Twister, Kindly Light, Lady Fingers, Long Stocking, Nina Winegar, Nutmeg Elf, Red Ribbons & Tylwyth Teg.

UFO's (these don't fly)

Unusual Forms are the most recently defined class of daylilies, inclusion based exclusively on form. The flower must have distinctive petal, and/or sepal shapes. These include: Pinching, Curling, Twisting, Cascading, and Quilling. The following cultivars are officially considered UFO's – Arm's To Heaven, Enjoy, Fellow, Jan's Twister, Lake Norman Spider, Lilting Lavender, Morticia, Open Hearth, Orchid Corsage, Peacock Maiden, Prague Spring, Spider Miracle.

Reblooming Daylilies

Here is a list of the Recurrent daylilies that have most impressed in our gardens. Arm's To Heaven, Bayou Bride, Canadian Border Patrol, Camden Gold Dollar, Condilla, Custard Candy, Daring Dilemma, Finlandia Gold, Frans Hals, Happy Returns, Highland Lord, Jason Salter, Leprechauns Wealth, Moonlit Masquerade, Paper Butterfly, Peach Rum Festival, Penny's Worth, Prester John, Scatterbrain, Siloam Ethel Smith, Siloam June Bug, Siloam Plum Tree, Siloam Red Ruby, Solomon's Robes, Stella D'Oro

Early Season Extenders

most daylilies in Ontario start blooming in July. Here is a list of cultivars that we find consistently start blooming in June or earlier. All American Gold, Bayou Bride, Camden Gold Dollar, Charles Johnson, Custard Candy, Flutterbye, Happy Returns, Joan Senior, Mendocino, Moonlit Masquerade, Prester John, Stella D'Oro, Siloam June Bug.

Late Bloom

The best September blooms in our Gardens – Custard Candy, Daring Dilemma, Decatur Special, Finlandia Gold, Frans Hals, Golden Prize, Peach Rum Festival, Scatterbrain, Solomon's Robes, Susan Weber

Dwarf Daylilies

by definition are those that are registered as blooming under 16" tall. Consider these – Penny's Worth (10"), Stella de Oro (11"), Little Missy(16"), Siloam Button Box (16"), Siloam Double Classic (16") These don't qualify as dwarfs but are still real short - Siloam Red Ruby (18"), Neal Berrey (18"), Peggy Jeffcoat (18"), Pocket Change (18"), Happy Return's(18"), Camden Gold Dollar(19")

Miniature

refers to the size or diameter of the bloom – in order to qualify as a miniature the bloom must be under 3" in diameter (can be any height) Bittersweet Honey(2.75"), Little Missy(2.75) Pardon Me (2.75"), Penny's Worth (1.5"), Promises Promises(2 7/8"), Siloam June Bug (2.5")

At 3" diameter these small flowers don't quite qualify as miniatures Camden Gold Dollar, Lilting Lady, Nutmeg Elf, Purity

Doubles

Always popular, our doubles collection for 2004 include All In All, Condilla, Dublin Elaine, Forty Second Street, Frances Joiner, Highland Lord, Kwanso, Land of Cotton, Peach Rum Festival, Peggy Jeffcoat, Prester John, Scatterbrain, tet Siloam Double Classic, Siloam Olin Frasier & Snow Blizzard.

Fragrant Daylilies

Fragrant cultivars we offer include All American Gold, Betty Warren Woods, Bill Norris, Blueberry Candy, Cool Moon Rising, Enjoy, Fellow, Firefly Frenzy(arriving this year), Flutterbye, Fluttering Beauty(arriving this year), Frozen Jade, Ice Carnival, Land of Cotton, Lemon Lace, Luscious Honeydew, Ming Snow, Peach Rum Festival, Persian Market, Prester John, Purity, Purple Mound, Scatterbrain, Siloam Bye Lo, Siloam Double Classic, Snow Blizzard, Snowflake Empress, Solomon's Robes, Stella de Oro, Vanilla Fluff, Wide Ride, Wind Song, Winsome Lady & Woodside Romance.
